

IN THE CLAIMS:

Please cancel Claims 28 and 36 without prejudice
and without disclaimer of subject matter.

Please amend Claims 27, 33, 34 and 35 as follows:

Sub D1

27. (Amended) An image processing system,
comprising:

a) an information processing apparatus

including:

operating means for entering information;

processing means for processing information

entered at said operating means;

display means for performing a display

corresponding to data processed by said processing means; and

an interface for connecting an external

apparatus; and

b) an image pickup apparatus detachable from
said interface, including:

image pickup means for picking up an object
image;

wherein said information processing apparatus
further includes:

detecting means for detecting that said image
pickup apparatus is connected; and

C¹
Cancel.

control means for controlling [the displaying state of said display means according to the output detected by said detecting means] said display means to display information sent from said image pickup apparatus in a window in a display screen thereon in a case that said detecting means detects that said image pickup apparatus is connected.

33. (Amended) An image processing system according to claim 27, wherein said [indicating means indicates] display means displays the result detected by said detecting means as marks.

C²

34. (Amended) An image processing system according to claim 33, wherein said marks [indicated by said indicating] displayed by said display means relates to a camera.

35. (Amended) An image processing system according to claim 27, said [indicating means further indicating] display means further displaying and image pickup condition of said image pickup means.
